Abstracts

Pheromone are the chemical molecules secreted by insects in the environment. The pheromones are released to signal their other mates for a food source or as an alert. Thus, these pheromones act as a communication between the insects spread across the field. Integrated pest management (IPM) is a method or approach towards preventing damage from pests in the farm field. IPM pheromones are synthetically manufactured which exactly imitates the naturally secreted pheromones. Thus, it helps in growing the crops in a healthy manner. The pheromones can be classified based on the interaction medium as aggregation, alarm or sex pheromones. IPM pheromones create an unfavourable situation for the further growth of pest. The IPM pheromones are used in one of the four control approaches as biological control, cultural control, mechanical and physical control and chemical control. The chemicals used for manufacturing of pheromones are semiochemicals. Depending on the pest type such as moth, beetles etc. the pheromones are manufactured specifically for that type of pest. Based on the Integrated Pest Management (IPM) Pheromones market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
