Abstracts

Intravascular ultrasound (IVUS) uses a tiny ultrasound transducer mounted on the tip of a catheter to image the interior of blood vessels. IVUS can be used to assess vessel/lumen diameter, lesion length, help determine the amount of plaque buildup in a vessel and its composition, and check to ensure stents have been properly placed and fully deployed. It can also help measure the effectiveness of balloon angioplasty or stenting during follow ups.

IVUS (intravascular ultrasound) catheters deliver confidence to guide complex PCI. Their exceptional deliverability enables crossing challenging lesions while providing best in class image quality to optimize PCI.
