Abstracts

Intravascular ultrasound is an imaging technique which entails the use of a catheter with an ultrasound probe at its tip. This technique is used to view the blood vessels from the inside and the endothelium of blood vessels in living beings. The most significant uses of intravascular ultrasound involve atherosclerosis imaging and the assessment of atheromatous plaque built up in the epicardial coronary artery. Intravascular ultrasound is also used during stenting procedures for an optimized and accurate outcome. Based on the Intravascular Ultrasound System (IVUS) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
