Abstracts

Iron is one of the most important elements required by the human body. It is one of the components of hemoglobin that transports oxygen throughout the body. High molecular weight iron dextran is the first iron product on the market for intravenous iron preparations. Hepcidin, ferritin, hemoglobin and transferrin are the major molecules that are critical in the regulation and function of iron. Due to advances in the technology of intravenous iron drugs, the development of intravenous iron drugs helps restore iron reserves in patients with iron deficiency anemia.
