Abstracts

An ion exchange resin or ion exchange polymer is an ion exchange in which a resin or polymer acts as a medium. It is an insoluble matrix (or support structure), usually in the form of small (0.25-0.5 mm radius) microbeads, usually white or pale yellow, and made of an organic polymer substrate. Beads are usually porous, providing a large surface area inside and inside. The capture of ions occurs with the release of other ions, so the process is called ion exchange. Ion exchange beads are widely used in different separation, purification and purification processes.
