Abstracts

IoT is creating new opportunities and providing a competitive advantage for businesses in current and new markets. It touches everything—not just the data, but how, when, where and why you collect it. The technologies that have created the Internet of Things aren't changing the internet only, but rather change the things connected to the internet—the devices and gateways on the edge of the network that are now able to request a service or start an action without human intervention at many levels.

Blockchain technology's core component is a technology protocol that enables data to be exchanged among multiple parties within a network. It does so without the need for intermediaries as network participants interact with encrypted identities (anonymously) and directly with each other using peer-to-peer communication.

The IoT and Blockchain market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
