Abstracts

Iron-deficiency anemia is a common type of anemia when the body does not have enough iron. Anemia is a medical condition caused due to low healthy red blood cells. RBCs (red blood cells) provide oxygen to body tissues. Iron plays a major role in making hemoglobin which is part of red blood cells. Lack of hemoglobin indicates less oxygen in the body. Hence, it is quite important to maintain iron levels. The human body needs iron for oxygen transport, Cellular respiration. Prevention is better than cure. Iron-deficiency anemia can be prevented through consumption of iron rich foods such as meat, vegetables, fruits, and grains. Vitamin C also helps to prevent iron-deficiency anemia.
