## Abstracts

Thiocarbamate is an oily liquid that works well in alkaline flotation circuits (pH 7-12), especially for spotted copper, Cu / Mo, Cu / Au. They are very effective as the main zinc collector, with iron sulfide being a problem. Isopropylethyl thiocarbamate (IPET or IPETC) is one of the thiocarbamates. It is a powerful chemical used as a mining collector for metal sulfide ores. The thiol component therein generally enhances the flotation of tarnished and slightly oxidized minerals, making the product a good metal element collector.
