Abstracts

Isostearic acid is a liquid fatty acid produced by the reaction of oleic acid with a natural mineral catalyst. The production of isostearic acid is completely based on the parent oil or fat. Due to its high thermal, odor, and oxidation stability, isostearic acid finds its application across several industries such as lubricants, personal care, chemical esters, textiles, and packaging. The branched structure of isostearic acid elevates its dispersing power due to which it is used in industrial and cosmetic applications for the stabilization of pigments and mineral particles in oils and solvents.

Based on the Isostearic Acid market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
