## Abstracts

IT robotic automation provides improved scalability for efficiently increasing or decreasing productions levels at reduced cost. In industries such where demand for products and services is seasonal as is the case with financial products, improved scalability offered by robotic automation helps to effectively scale throughput at a fixed level of quality and known service levels. IT robotic automation helps increase security of processes owing to reduced human intervention and limited access to critical resources.

Based on the IT Robotic Automation market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
