Abstracts

L-carnitine is a chemical produced in the body from the amino acids lysine and methionine and is also found in food (mostly in meat products). It transports fatty acids into the mitochondria, which help the body convert fat into energy. L-carnitine supplementation is especially effective during strenuous exercise. In addition, L-carnitine can help treat cardiovascular disease, kidney disease, etc., and can also be used as a nutritional supplement for pregnant women, premature babies, vegetarians and dieters. However, taking large amounts of L-carnitine may cause nausea, vomiting, abdominal pain, and diarrhea.
