Abstracts

Lakoxamide is the third generation of new antiepileptic drugs. It has a unique mechanism to enhance the slow inactivation of voltage gated sodium channels, and has the pharmacokinetic characteristics of high bioavailability and bioequivalence of different dosage forms, which can effectively control seizures. Lakoxamide can not only be used in combination therapy for patients with focal epilepsy aged 4 years and above, but also as a single drug therapy for children (? 4 years old), adults and some special epilepsy patients, with good treatment results. Lakoxamide is generally safe. Common adverse reactions are dizziness, headache, nausea, lethargy, etc., most of which are mild to moderate. The product forms of lacosamide include lacosamide tablets, lacosamide oral liquid and lacosamide injection. This research report mainly conducts market research on Lakosamide injection.
