Abstracts

Laparoscopic devices are used during laparoscopy, a type of minimally invasive surgical procedure used for diagnostic and treatment purposes. Laparoscopy is performed in pelvis or abdomen through small incisions (about 0.5 to 1.5 cm) with the help of a camera. There are two types of the laparoscope: a telescopic rod lens system connected to a video camera, and a digital laparoscope where a digital video camera is placed at the end of the laparoscope without rod lens system. The targeted areas treated through laparoscopy are colon, liver, bile duct, pancreas, and others. The major instruments used during laparoscopic surgery are laparoscope, along with insufflators and energy devices.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Laparoscopic Devices market covering all its essential aspects.
