Abstracts

Liquid chromatography is a fundamental separation technique in the life sciences and related fields of chemistry. Unlike gas chromatography, which is unsuitable for nonvolatile and thermally fragile molecules, liquid chromatography can safely separate a very wide range of organic compounds, from small-molecule drug metabolites to peptides and proteins. LCMS stands for Liquid Chromatography/Mass Spectrometry. It refers to the combination of liquid chromatographic separation with mass spectrometric detection.

Liquid Chromatography Mass Spectrometry (LC/MS) is an analytical chemistry laboratory technique for identification, quantitation and mass analysis of materials. This technique consents for the structural interpretation of unknown molecules through fragmentation. Similar to HPLC, Liquid Chromatography Mass Spectrometry utilizes a compound's intrinsic affinity for both a "mobile phase" (typically a buffered solvent) and a "stationary phase" (porous solid support with specialized coating).

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the LCMS market covering all its essential aspects.
