## Abstracts

Light-emitting Diodes (LEDs) are lighting sources for general lighting applications with ten times as efficient as compared to incandescent lighting. Such attribute combined with their long working life and reliability has made them the suitable choice for next generation of lighting systems including emergency, backlight, automotive, indoor and outdoor. To ensure accurate operation and to control the light intensity, LEDs need an efficient driver, normally implemented by power electronics-based conversion stages to match the LED characteristics with the AC grid voltage and to generate a controllable and high-quality light.

Based on the Led Lights market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
