## Abstracts

Lignosulfonates are obtained as by-products of the wood pulp production process using sulfite pulping. Lignosulfonates are manufactured during the acid sulfite process. The process of obtaining lignosulfonates involves the sulfonation of lignin separated from cellulose. In this process, lignosulfonates are formed as by-products of sulfite wood pulping. One of the early methods used for the production of calcium lignosulfonates was the Howard process, wherein lignin products are separated from black liquor by the precipitation of calcium lignosulfonates and excess lime.
