Abstracts

Linear slides also known as linear motion bearings which are designed to provide free motion in a one direction only. There are different types of linear slides, they provide linear motion based on the bearings which might be ball bearing, linear roller bearing, fluid or magnetic bearing, dovetail bearing. There are few slides that provide movement along both X and Y axis like linear stages, XY tables, machine slides and others. They are basically light weighted compact and operates with very low sliding resistance. Due to its low inertia and very small frictional factor it excels in high-speed responsive performance. Linear slides provide a high load capacity by using Gothic arch grooves and are highly accurate and rigid. Linear ball slides are highly corrosion resistant slides which has extremely low friction coefficient due to stainless steel ball roll on four stainless steel needle roller which are highly corrosion resistant. Linear slides are designed in such a way that they provide robust applications that demand high thrust along stiffness and accuracy.

Based on the Linear Slides market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail.
