Abstracts

Safflower oil is a popular cooking oil that comes from the seeds of the safflower plant. Some research suggests it may have some health benefits when people use it in the diet and on the skin. Safflower oil may be a more healthful option than olive oil when cooking at high temperatures, thanks to its high smoke point and neutral flavor. High-linoleic safflower oil contains higher quantities of polyunsaturated fats. It is not suitable for heating but is ideal for use in salad dressings.
