## Abstracts

In mining, in the food industry, in water treatment—liquid filters are used in a multitude of applications. Given the increasing shortage of water, they continue to gain in importance. The specific requirements placed on the filters in the respective uses are just as diverse as the applications themselves. Separating contaminants ranging from pebbles to grains of sand to microscopic particles, the filter has to be optimally adjusted to the specific particle size. Filter media are the heart of any filtration plant. They determine which particle size can be deposited and whether the filter is able to achieve the required efficiency. These filter media therefore have to flexibly adapt to the specific requirements of the respective application. In some applications they have to be particularly thin and robust to be able to withstand pressure affecting them during filtration.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Liquid Filtration Media market covering all its essential aspects.
