Abstracts

In mining, in the food industry, in water treatment—liquid filters are used in a multitude of applications. Given the increasing shortage of water, they continue to gain in importance. The specific requirements placed on the filters in the respective uses are just as diverse as the applications themselves. Separating contaminants ranging from pebbles to grains of sand to microscopic particles, the filter has to be optimally adjusted to the specific particle size. Filter media are the heart of any filtration plant. They determine which particle size can be deposited and whether the filter is able to achieve the required efficiency. These filter media therefore have to flexibly adapt to the specific requirements of the respective application. In some applications they have to be particularly thin and robust to be able to withstand pressure affecting them during filtration.

Based on the Liquid Filtration Media market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
