Abstracts

Liraglutide is a glucagon-like peptide-1 receptor agonist (GLP-1 receptor agonist) also known as incretin mimetics. It works by increasing insulin release from the pancreas and decreases excessive glucagon release. Liraglutide was approved for medical use in the European Union in 2009, and in the United States in 2010.

Semaglutide, sold under the brand name Ozempic among others, is an anti-diabetic medication used for the treatment of type 2 diabetes and chronic weight management.

Semaglutide acts like human glucagon-like peptide-1 (GLP-1) such that it increases insulin secretion, thereby increasing sugar metabolism. It is distributed as a metered subcutaneous injection in a prefilled pen or as an oral form. One of its advantages over other antidiabetic drugs is that it has a long duration of action, thus, only once-a-week injection is sufficient.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Liraglutide And Semaglutide market covering all its essential aspects.
