## Abstracts

Lithium Battery Cell Assembly Machine is an automated assembly system specially designed for secondary battery assembly. In the lithium-ion battery assembly process, the positive electrode (anode) is first stacked on the negative electrode (cathode), and then pressed several times until the electrode materials are in firm contact with each other. The main function of the Lithium Battery Cell Assembly Machine is to fill the electrolyte or mercury dispensing device to a specific level for commercial batteries. Processes part parts and dumps them into the relevant feeders on the conveyor belt.
