Abstracts

Electrolyte plays a key role in transporting the positive lithium ions between the cathode and anode. High purity electrolytes are a core component of Li-ion batteries. The most commonly used electrolyte is comprised of lithium salt, such as LiPF₆ in an organic solution. Li-ion batteries use an intercalated lithium compound as one electrode material, compared to the metallic lithium used in a non-rechargeable lithium battery. The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Lithium Ion Battery Electrolyte market covering all its essential aspects.
