## Abstracts

Lithium Vanadium Phosphate is a compound with a monoclinic structure. It not only has good safety, but also has a higher Li<sup>+</sup> ion diffusion coefficient, higher discharge voltage and energy density. It has the same advantages as lithium cobalt oxide and lithium iron phosphate and overcame the disadvantages, thus considered to be a better cathode material than LiCoO<sub>2</sub>. However, the vanadium material has the disadvantages of high price, difficulty in extracting the precursor and high energy consumption, and there is a possibility that the material synthesis process and the battery discarded can produce toxicity and cause environmental pollution.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Lithium Vanadium Phosphate market covering all its essential aspects.
