Abstracts

Lithium Vanadium Phosphate is a compound with a monoclinic structure. It not only has good safety, but also has a higher Li⁺ ion diffusion coefficient, higher discharge voltage and energy density. It has the same advantages as lithium cobalt oxide and lithium iron phosphate and overcame the disadvantages, thus considered to be a better cathode material than LiCoO₂. However, the vanadium material has the disadvantages of high price, difficulty in extracting the precursor and high energy consumption, and there is a possibility that the material synthesis process and the battery discarded can produce toxicity and cause environmental pollution.

Based on the Lithium Vanadium Phosphate market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
