## Abstracts

The Low Code Development Platform (LCDP) is a piece of software that provides an environment for programmers to create application software through a graphical user interface and configuration rather than traditional computer programming. The platform can focus on the design and development of specific types of applications: for example, such a platform can generate fully operational applications or additional coding that needs to be specific to a particular situation. The low-code development platform reduces the number of traditional manual encodings, which accelerates the delivery of business applications. A common benefit is that a wider range of people can contribute to the development of an application - not just applications with formal programming skills. LCDP also reduces the initial cost of setup, training and deployment

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Low-Code Development Platforms market covering all its essential aspects.
