## **Abstracts**

The Low Code Development Platform (LCDP) is a piece of software that provides an environment for programmers to create application software through a graphical user interface and configuration rather than traditional computer programming. The platform can focus on the design and development of specific types of applications: for example, such a platform can generate fully operational applications or additional coding that needs to be specific to a particular situation. The low-code development platform reduces the number of traditional manual encodings, which accelerates the delivery of business applications. A common benefit is that a wider range of people can contribute to the development of an application - not just applications with formal programming skills. LCDP also reduces the initial cost of setup, training and deployment
