## Abstracts

A low-temperature battery is a new generation lithium-ion battery, mainly used in a low-temperature environment. It is a unique battery developed to tackle the low-temperature defects that commonly appear in the performance of chemical power sources. As the name suggests, the low-temperature battery can power in extremely low temperatures as low as  $-50^{\circ}\text{C}$ .

The low-temperature battery is ideal for equipment operating under icy conditions. A low-temperature battery can effectively power the electronic equipment requirement. Generally, at a  $-20^{\circ}\text{C}$  weather condition, a typical lithium-ion battery can work without any issues. But when the temperature is below  $-30^{\circ}\text{C}$  or even down  $-50^{\circ}\text{C}$ , a low-temperature lithium-ion battery is imperative to keep the device moving forward.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Low Temperature Battery market covering all its essential aspects.
