An orthopedic prosthetic is an artificial limb designed to substitute a missing body part of a patient. Artificial limbs make it possible for persons who have lost limb/limbs to function efficiently.

Lower extremity prosthetics is used for amputation of lower region from hip, thigh, leg, ankle and foot. Whereas liners are protective covers made of flexible, cushioning material and worn over the residual limb to reduce movement and chafing between the skin and socket. Liners are designed with specific characteristics to work with different suspension systems. However, socket is a part of a prosthesis, into which the stump of the remaining limb fits.
