## **Abstracts**

Magnetic hyperthermia is the ever-promising 'fourth leg' of cancer treatment. This thermotherapy is based on the fact that magnetic nanoparticles can transform electromagnetic energy from an external high-frequency field to heat. As a consequence, if magnetic nanoparticles are put inside a tumor and the whole patient is placed in an alternating magnetic field of well-chosen amplitude and frequency, only the tumor temperature would rise. The elevation of temperature may enhance tumor oxygenation and radio- and chemosensitivity, thus shrinking tumors. As well, this experimental cancer treatment has also been investigated for the aid of other ailments, such as bacterial infections. The technique is also of great value in many other applications from drug-delivery in medicine to the polymer industry.

Based on the Magnetic Hyperthermia Device market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
