## Abstracts

Mancozeb, as the name suggests, is a combination fungicide made of manganese (maneb), zinc (zineb). The mixture of these two organic functional groups makes this type of fungicide applicable across a wide range of crops. The mode of action of mancozeb fungicides is non-systemic, multi-site protective, and action only on contact with the target crop part. Once the fungicide attacks multiple sites in the fungal cells, inactivating amino acids and several growth enzymes and disrupting activities such as respiration, lipid metabolism, and reproduction.

The broad spectrum fungicide can be applied as a standalone treatment for controlling fungal diseases such as leaf spot, Anthracnose, Downy mildew, Pythium blight, and rust on a wide range of vegetables, fruits, crops, and nuts. The fungicide is also used in combination with several other fungicides to lead to specialized and better disease management results.
