## Abstracts

A coating is a layer of a substance that is spread over a surface to protect it from damaging elements in its environment as well as to improve its appearance. Coatings differ in their production methods, applications, and functionalities. The conventional functions of protection and aesthetics are often integrated and extended to meet additional and more specific demands. On the basis of end-use, the coatings are segmented into three major categories: architectural and decorative coatings, industrial coatings, and special purpose coatings. Within these categories, there is a wide variety not only in terms of the properties that the coatings themselves possess but also in terms of the purposes they serve, the technologies used to manufacture them, and the methods used to apply them.
