Abstracts

Marine oil water separator is mainly used in marine vessels or ships. Oil water separator is used to ensure the oil content in the bilge water is minimum or under the specified limit. It is one of the essential equipment in the ship for monitoring and control system for the discharge of water from the ship preventing any type of oil getting into the sea. According to regulation, one cannot discharge water with oil content more than 15 PPM in the sea. It is because the oily water discharged makes a layer over the sea water surface which stops the flow of oxygen into the water and harms the aquatic ecosystem damaging the flora and faunae of the sea.

Based on the Marine Oil Water Separator market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
