Abstracts

Marine seismographic acquisition is the method used for collecting information about the subsea surface. In marine seismic operation, the geophysicists use the same principle used by earthquake seismologists, but relatively low acoustic energy (sound waves) is generated mechanically for collecting the data. The data thus collected provides accurate information about the rock formation and other vital data of the ocean surface. Marine seismic survey is mainly used for oil and gas exploration, but on land they help in locating mines or even to find ground water.

Based on the Marine Seismic Equipment & Acquisition market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
