## Abstracts

A Master Alloy is an alloy containing two (binary), three(ternary) or more elements (multinary) with a defined composition. It is a semi-finished product manufactured for use as a raw material by the titanium industry. Master alloys are added to molten metal to obtain the desired composition and/or influence the as-cast structure. Master alloys can contain more than 50 weight per cent of the main alloying element. They can be produced by melting or by mixing the individual constituents and then compacting them.
