Abstracts

Mechanical transmission is widely used in mechanical engineering, mainly referring to the transmission of power and motion by mechanical means. There are two types: one is the transmission of power and friction transmission by the friction between the parts, and the other is the meshing transmission that transmits the power or movement by the engagement of the active part with the driven part or by the middle piece.

Based on the Mechanical Power Transmission market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail.
