Abstracts

Medical manifolds are designed to supply the correct pressure and volume of gas from gas cylinders or tanks to a healthcare facility's pipeline system.

The typical medical manifold - for oxygen, N₂O, CO₂, or medical AIR - common consists, in accordance with EN ISO 7396-1 and HTM 02-01, of three sources, with automatic changeover from empty source to full source.

A liquid source is commonly used as the primary oxygen supply, while a dual-sided cylinder is used as a reserve supply-source. Medicop manifolds are specifically designed for optimal functionality and reliability, and offer users a number of very tangible advantages.
