Abstracts

Tracheostomy is a surgical procedure performed to create a surgical airway in the trachea. Various disease conditions such as difficulty in breathing, neurological trauma, and infectious or chronic airway diseases require a tracheostomy procedure to be performed. Tracheostomy can be a temporary procedure or a permanent one.

Tracheostomy tubes are small medical devices that are manufactured to facilitate the tracheostomy procedure. A tracheostomy tube is a small, curved tube. It is inserted into the trachea through a small incision made by the surgeon. This small incision facilitates a surgical passage of air and assists the surgeon to establish respiration in the patient. Tracheostomy procedures and thereby, tracheostomy tubes have currently become an integral part of surgical procedures.
