## **Abstracts**

Metal powders are finely divided or powdered metals used in fabricating sintered parts, thermal spraying, filling plastics, and other specialized applications. Powdered metals include most types of metals.

Metal powders are used in powder metallurgy, which is the process of making metal parts and components by heating compacted powdered metals to just below melting. Powder metallurgy is also known as press-and-sinter. Many metals are treated with this process to produce a porous material called sponge fines. For example, iron sponge fines are small particles of iron ore that have been reduced by heat. Sponge iron can come in lumps or finer particles and is frequently used as an alternative to steel scrap metal.
