## Abstracts

Iron and steel scrap, also referred to as ferrous scrap, comes from end of life products (old or obsolete scrap) as well as scrap generated from the manufacturing process (new, prime or prompt scrap). Obsolete ferrous scrap is recovered from automobiles, steel structures, household appliances, railroad tracks, ships, farm equipment and other sources. Metals are among the first materials to be captured in the recycling process. They are a great recyclable because of their high value, metal density lends to efficiency in transport, and the properties of metals allow them to be recycled again and again.
