## Abstracts

Micro Nuclear Reactors (MNRs) are a distinct class of small reactor systems, typically of under 30MW electricity and 100MW thermal output, which are expected to occupy distinct and different market niches, in comparison to larger Small Modular Reactors (SMR's).

Micro nuclear reactors are more flexible and require less maintenance, an advantage of MNRs is their simplicity that allows them to be constructed relatively easily.

Based on the Micro Nuclear Reactors (MNRs) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
