## Abstracts

Microbial fermentation APIs are secondary metabolites produced by micro-organisms such as fungi and actinomycetes. The micro-organisms are capable of converting inexpensive carbon sources (starch, glucose, sucrose, etc.) and nitrogen sources (soybean flour, cotton-seed flour, peptone, etc.) into highly valuable API's or key intermediates (such as amino acids, vitamins, antibiotics) in liquid or solid media under certain growth conditions (nutrients, temperature, PH, oxygen supply).

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Microbial Fermentation APIs market covering all its essential aspects.
