## Abstracts

Microbial fermentation APIs are secondary metabolites produced by micro-organisms such as fungi and actinomycetes. The micro-organisms are capable of converting inexpensive carbon sources (starch, glucose, sucrose, etc.) and nitrogen sources (soybean flour, cotton-seed flour, peptone, etc.) into highly valuable API's or key intermediates (such as amino acids, vitamins, antibiotics) in liquid or solid media under certain growth conditions (nutrients, temperature, PH, oxygen supply).

Based on the Microbial Fermentation APIS market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
