Abstracts

Microducts are small conduits for housing microcables. CommScope microduct sizes include 10 mm, 12.7 mm and 16 mm that can house up to 144 fiber counts. Microducts can be used in fiber-to-the-home (FTTH), fiber-to-the-business (FTTB), long-haul, backhaul, premise fiber deployments and nearly any location where traditional conduit installations occur. The advantage they provide is that microducts can be pre-installed within a larger conduit, or simply pushed into existing conduits already in place. Microducts can also be configured in arrays or multiple units as well as single ducts. Operators may solve today's needs without microducts by pulling standard cables into an existing conduit, but pulling additional cables later may be difficult or, in some cases, impossible.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Microduct market covering all its essential aspects.
