## Abstracts

Mim (Metal Injection Molding) Furnace is a furnace in which fine powder metal is mixed with a binder material to produce a 'raw material' which is then injection molded and cured. The molding process allows for the formation of high volume, complex parts in one step. After molding, an adjustment operation is performed to remove the binder and densify the powder.

Based on the Mim (Metal Injection Molding) Furnace market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
