Abstracts

Injection molding is the most commonly used manufacturing process for the fabrication of plastic parts. Injection molding is used to manufacture a wide variety of products, which vary considerably in their dimensions, complex structures, and end-use applications. The injection molding is done by an injection molding machine and requires plastic and the typical raw material, and a shaping mold. The molding machine melts the plastic, which is then injected into the mold, where it cools and solidifies into the final part.
