Abstracts

Minimally Invasive Surgery (MIS) is becoming increasingly popular for all types of surgical procedures. The procedure involves making small incisions in the skin that are used to insert an endoscope and special surgical instruments instead of making a large incision. Recovery times are often quicker and patients experience less discomfort than they would after conventional surgery. As the techniques and procedures improve, MIS is being found to be safe, effective, and preferred for many different types of surgeries. The expansion of these procedures results in advances in the instruments required to accurately perform these tasks.
