Abstracts

Minimally Invasive Surgery (MIS) is becoming increasingly popular for all types of surgical procedures. The procedure involves making small incisions in the skin that are used to insert an endoscope and special surgical instruments instead of making a large incision. Recovery times are often quicker and patients experience less discomfort than they would after conventional surgery. As the techniques and procedures improve, MIS is being found to be safe, effective, and preferred for many different types of surgeries. The expansion of these procedures results in advances in the instruments required to accurately perform these tasks.

Based on the Minimally Invasive Surgery Devices market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
