Abstracts

Mining equipment is used to extract natural resources such as coal, metals, and minerals. Some of the minerals and metals extracted include iron ore, bauxite, titanium, copper, gold, platinum, sand, gravel, salt, and other non-metallic products. Mining equipment rental is a type of rental activity in which the lessee chooses the equipment he chooses from the manufacturer or vendor, and enters into a longer-term rental with the lessor. The high cost of capital, maintenance cost, and overhead cost attached with the ownership of mining equipment have compelled end-users to rent mining equipment instead.

Based on the Mining Equipment Rental market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
