Abstracts

Mining can be carried out at the surface as well as underground. Rock drills, scoops, loader, hydraulic shovels, and draglines are used constantly in the operations of mining which causes wear and tear. This causes decrease in downtime and life of the equipment. Hence, mining lubricants play an important role in mining activities. In mining, the anti-wear performance and the need of good corrosion protection are mainly required to protect the metal surface. The mining lubricants are used to reduce costs by extending drain intervals, improving energy efficiency, and increasing equipment life.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Mining Lubricant market covering all its essential aspects.
